EDUCATION

Indian Institute of Technology, Jodhpur <i>Bachelor of Technology in Electrical Engineering; Minor in Management; GPA: 7.71</i>	Jodhpur, India October 2022 – May 2026
Dholakiya Public School <i>Higher Secondary Education Certificate; Percentage: 81%</i>	Rajkot, Gujarat May 2020 – June 2022
Masoom School <i>Secondary Education Certificate; Percentage: 91%</i>	Rajkot, Gujarat May 2019 – April 2020

WORK EXPERIENCE

Artificial Intelligence Intern <i>Cosgrid Networks</i>	May 2025 – July 2025 Chennai, TN, India
- Designed a full-scale ML system for network intrusion detection on the ISCXIDS2012 dataset, reaching 94% classification accuracy with Random Forest and XGBoost - Engineered GitHub-MCP, an LLM-driven system enabling natural language interaction with GitHub repositories via Model Context Protocol; reduced code search time by 60% and improved developer efficiency - Developed anomaly and threat detection dashboards with OpenSearch, analyzing over 20K+ WAF log entries; also automated SEO audits using Google Trends API - Deployed secure microservices with NATS and collaborated on chatbot development, improving team communication by 30%	

PROJECTS

Trading Result Analysis <i>Python, Statistical Analysis, Monte Carlo Simulation</i> GitHub	Sept 2025
- Performed walk-forward testing and detailed analysis of 92 trades executed by a custom algorithm over a 28-day period, focusing on trade profitability and risk metrics - Analyzed key statistics such as total profit of \$118.02, average profit per lot of \$0.49, and a profit-loss ratio of 1.6 to evaluate algorithm effectiveness - Utilized statistical methods including skewness and kurtosis analysis, trade duration distribution, and drawdown measurement to assess performance stability - Simulated future trade outcomes with Monte Carlo methods to estimate a 56.63% probability of profit over the next 100 trades and potential best/worst case scenarios	
Map Charting Student Math Understanding <i>LLMs, PEFT, LoRA</i> GitHub Kaggle	June-Oct 2025
- Participated in the Kaggle competition, achieving a public score of 0.948 and ranking 177th out of 1781 teams by accurately classifying student misconceptions in math responses - Developed an ensemble model combining Gemma2, Qwen3, and DeepSeek-Math language models to leverage their complementary strengths in understanding mathematical reasoning and student explanations - Applied PEFT (Parameter-Efficient Fine-Tuning) and LoRA (Low-Rank Adaptation) techniques to fine-tune large language models efficiently, improving prediction accuracy while minimizing computational cost - Designed a weighted ensemble strategy that combined model outputs based on individual performance	
StockPeer Analyzer <i>Python, Streamlit, yfinance, Altair</i> GitHub Demo	Oct 2025
- Developed an interactive Streamlit dashboard to analyze and compare stocks within their peer groups using real-time data from yfinance - Created clear and interactive visualizations with Altair to help investors quickly understand financial trends and stock performance - Implemented automated workflows for data fetching and processing, ensuring up-to-date and accurate stock comparison insights	

POSITION OF RESPONSIBILITY

Public Relation Head - Prometeo, IIT Jodhpur	Oct 2024 – Feb 2025
Support Team Member - Placement Cell, IIT Jodhpur	June 2023 – May 2024
Student Guide - SWC, IIT Jodhpur	June 2023 – June 2024
Public Relation Assistant Head - Prometeo, IIT Jodhpur	Nov 2023 – Feb 2024

TECHNICAL SKILLS

Languages/Database: Python, C++, C, JavaScript, SQL, MATLAB
Frameworks: PyTorch, Scikit-learn, LangChain, FAISS, Streamlit, NumPy, Pandas, Matplotlib, XGBoost
Software & Tools: Git, Shell Scripting, Docker, Linux, OpenSearch, GitHub REST API, NATS, VS Code

ACHIEVEMENTS

Open Source Contributions: Contributed to Scikit-Learn (PR #31539), Optuna (PR #328), Hugging Face, and CrewAI with merged pull requests improving ML libraries and tools
--
